Active Directory File Access – Test Report

Environment: Windows Server 2025 (DC01), Windows 11 Enterprise, corp.lab

Shared resource: \\DC01\Departments

Purpose: Verify that Active Directory security groups enforce the correct departmental access permissions.

User	Sales	Finance	Public
Alice Smith	Pass	Pass	Pass
Ben Jones	Pass	Pass	Pass
Support Test	Pass	Pass	Pass

All nine tests passed against the intended allow/deny rules.

Additional Validation: The GPO- Map Department Share policy successfully mapped \\DC01\Departments to drive S: for all three user accounts.

Final Result: Access restrictions and Group Policy drive mapping function as intended

Lessons learnt:

Share permissions and NTFS permissions work together to control access to a resource

Active Directory security groups simplify managing employee access.

Group Policy can automatically configure network drives for domain users.

Testing with different user accounts verifies that access is restricted correctly.
